

Mohd Viqaruddin Anas

Bangalore, Karnataka — viqaruddinas2694@gmail.com — +91 8919166006 — [LinkedIn](#) — [GitHub](#) — [LeetCode](#) — [Portfolio Website](#)

Professional Summary

Software Developer with hands-on experience building production-ready, cloud-deployed web applications and AI-driven systems. Proficient in scalable backend design, multi-tenant architectures, and data processing pipelines. Interested in building efficient and reliable software systems.

Technical Skills

Languages: C, C++, Java, Python, JavaScript, SQL, HTML, CSS

Frameworks & Libraries: Node.js, Express.js, React.js, Streamlit, EJS, Bootstrap

Tools & Technologies: Git, GitHub, VS Code, Postman, MongoDB, SQLite, RESTful APIs

Relevant Coursework: Data Structures & Algorithms, OOP, DBMS, OS, CN, ML

Projects

PostVisit – AI-Powered Healthcare Platform — [Live](#) — [GitHub](#)

Node.js, Express.js, MongoDB, Gemini API, Cloudinary, Chart.js, EJS, Render

- Addressed the problem of complex medical reports by building an end-to-end AI pipeline that extracts 10 key health indicators from PDFs/images and converts them into clear, actionable insights within seconds, reducing manual interpretation effort by 80%.
- Developed a health intelligence system combining report analysis, a context-aware AI chatbot, and dashboards to track 10 metrics over time with exportable reports.
- Engineered an asynchronous processing pipeline where uploads trigger background jobs, eliminating user wait time, and built a secure, scalable backend using MVC architecture with role-based access control for sensitive health data.

ExitLens – AI-Powered User Behavior Analytics Platform — [Live](#) — [GitHub](#)

Node.js, Express.js, React.js, MongoDB, Gemini API, JWT, Render

- Built and deployed a SaaS analytics platform with a lightweight (3KB) script to track clicks, scroll depth, and detect rage/dead clicks and bounce sessions across multiple client websites.
- Designed a secure multi-tenant backend with API key isolation, JWT auth(httpOnly cookies), and rate limiting to handle high-volume event ingestion without cross-tenant data leakage.
- Integrated Gemini AI via a prompt-engineered pipeline to convert session data into severity-scored UX insights, visualized with heatmaps and a dashboard for faster issue detection.

UrbanStay – Full-Stack Vacation Rental Platform — [Live](#) — [GitHub](#)

Node.js, Express.js, MongoDB, Mongoose, Mapbox API, Cloudinary, Passport.js, EJS, Brevo, Render

- Engineered an end-to-end rental listing platform with full CRUD functionality, integrating Cloudinary for image storage and Mapbox API for geolocation-based listing visualization, deployed on Render with CI/CD.
- Implemented category-based filtering and regex-powered location search with secure authentication using Passport.js, and built a complete booking lifecycle system with date validation, dynamic pricing, booking history, cancellations, and event-driven email notifications via Brevo; optimized backend using MVC architecture.

Education

B.E. in Information Science and Engineering

BMS College of Engineering, Bangalore

2023 – 2027

CGPA: 8.5 / 10.0

Certifications & Achievements

- Research paper accepted at IEEE WCCST-2026 — “Knowledge Distillation for Cataract Classification using a ViT-DenseNet Framework”.
- Google Cloud Career Launchpad – Cloud Engineer Track (Google Cloud).
- Solved 450+ Data Structures & Algorithms problems across LeetCode and GeeksforGeeks with a 365+ day coding streak, demonstrating strong problem-solving ability and consistency.
